EDUCATION

Georgia Institute of Technology, Atlanta, GA — *B.S. in Computer Science* | 2020 - 2024

Threads: Intelligence and Media

Awards: Graduation with Honors, Dean's List

Certification(s): Microsoft Certified: Azure Fundamentals (AZ-900) | Microsoft | April 2026

WORK EXPERIENCE

SkillStorm — Atlanta, GA

Salesforce Developer | January 2026 - Present

- Platform Development: Supports the design of a Salesforce platform using custom objects, relationships, Flows, and Apex, emphasizing data standardization, integrity, and scalable schemas transferable to analytics and reporting systems.
- Data Modeling: Designs and maintains structured data models within Salesforce, focusing on normalized schemas, standardized fields, and transformation logic that prepares raw operational data for downstream SQL-based pipelines.

ProAutomated — Atlanta, GA

Automation & Controls Engineer | February 2025 - December 2025

- Controls Commissioning & Coding: Implements and commissions complex control systems in QTS data centers, including PLC programming, EPMS/BMS functional testing, and network troubleshooting to ensure seamless device communication for Microsoft and Meta systems.
- Debugging & Optimization: Analyzes and resolves software bugs in control systems, optimizing network configurations and automation logic for peak performance.
- Training and Leading: Trains new field service engineers for EPMS/BMS functional testing and organizes and works with managers and on-site energy marshals to meet site-wide deadlines.

Invisible Technologies — Remote

Advanced AI Trainer Software Developer - Contractor | February 2024 - February 2025

- Prompt Engineering: Analyzed and collaborated with the client's LLM systems and API to identify hallucinations in their models' responses, and wrote and coded those solutions in place of the faulty responses.
- Coding-Focused Hallucinations: Conduct rigorous analyses to assess the client's AI model accuracy, resilience, and safety by actively identifying and documenting hallucinations in Java, Spring, Spring Boot, TypeScript, JavaScript, HTML, XML, and Python-related prompts, and recommending improvements for enhanced performance.

MessageGears — Atlanta, GA

Software Development Lead Intern | May 2023 - August 2023

Software Development Intern | May 2022 - August 2022

- Full-Stack Development: Contributed to a production Java and TypeScript-based enterprise messaging platform, developing features in a Single Page Application (Angular) with backend services in Java and relational database interactions using SQL. Used text editors and IDEs such as Visual Studio Code, IntelliJ, and Vim.
- Agile Story Delivery: Completed 27+ Jira user stories and resolved 15+ bugs across the platform, addressing issues in UI behavior, scheduled job functionality, personalization attributes, pagination controls, and component styling.
- Java Backend Development: Implemented and refactored backend components in Java, contributing to REST-based services that exchanged JSON/XML data between application layers.
- Database and SQL Work: Modified relational database schemas and wrote SQL scripts to support new application features and bug fixes, validating changes using SQL Workbench and development tooling.
- Build and Development Workflow: Worked within a CI/CD development pipeline using Gradle builds and deployed services to Apache Tomcat within a containerized development environment using Docker.
- Front-End Engineering: Developed and improved Angular UI components within the SPA, including updates to date pickers, tooltips, pagination controls, and button state logic to improve usability and consistency.
- Front-End Debugging: Used Chrome Web Developer Tools to inspect network requests, debug TypeScript behavior, and troubleshoot front-end rendering issues during feature development and bug fixes.
- Testing and QA Automation: Developed and executed automated tests using Selenium and Cypress, including UI, integration, and REST API validation to ensure reliability before feature releases.
- Intern Leadership: Mentored incoming interns during onboarding and sprint execution, assisting with story breakdown, debugging strategies, and development workflows, contributing to a 96% improvement in internship program completion metrics compared to the prior year.

- Teaching and Curriculum Development: Instructed over 200 students per semester in object-oriented programming and AGILE methodologies. Developed lecture content on Git/Github usage and logic, including custom lecture slides.
 - Administrative Contributions: Collaborated on project descriptions and requirements and contributed to building the instructor example for the term project, which was a mobile and desktop application using Android Studio or Maven-based Java with JavaFX with functional and unit tests using TestFX and Mockito. Engaged in staff meetings to discuss curriculum enhancements and student assessment.
-

PROJECTS

Portfolio Website - <https://abdul-rahmansayed.github.io/> | November 2025 - Present

- Built a responsive multi-page SPA using Vue.js 3, Vue Router, and a Vite build pipeline
- Designed a reusable component architecture with a navigation dropdown supporting hover and click/touch interactions
- Integrated an embedded PDF resume viewer with a direct download link using dynamic asset imports
- Established a design system using CSS custom properties for a shared color palette, spacing, and typography
- Configured automated deployment to GitHub Pages via a GitHub Actions CI/CD workflow on every push to main

Artificial Neural Intelligence Machine Entity | September 2022 - December 2022

- Machine Learning Model: Collaborated in a team of 4 to build a Python-based machine learning model using Tensorflow and Pytorch. The model colorized and upscaled low-resolution black-and-white face images.
- Generative Adversarial Network (GAN): Utilized a GAN to reconstruct images from downsampled and de-colored datasets. Ground-truth images were derived from the original dataset.

Interactive Parallel Coordinate Plot | December 2022

- Interactive Parallel Coordinate Plot: Developed a data visualization solution, an interactive parallel coordinate plot, using D3.js, HTML, SVG, and CSS. Utilized a given CSV data file as input for constructing the plot.
- User-Driven Data Manipulation: Implemented data filtering and manipulation based on user input. The parallel coordinate plot dynamically responds to user interactions.

Jim's Dungeon: Dungeon Crawler | January 2020 - August 2020

- Worked as a team lead and led 4 other peers using AGILE practices and tools to complete a multi-featured dungeon adventure game using JavaFX with 6 milestones.
 - Used Maven to set up the underlying structure of the code and used TestFX to make functional and unit tests to test the performance and effectiveness of the underlying code.
 - Created a multi-page application that allows users to set and create the initial game state and used procedural generation to construct different areas of the game map.
-

TECHNICAL SKILLS

Mastered Concepts: Object-Oriented Design, Agile Development Process, Scrum Development Process, Data Structures, Algorithms, Artificial Intelligence, Dynamic Programming, and Machine Learning (Pytorch and Tensorflow). Knowledge-Based AI, Game AI, Computer Vision, Azure Cloud Fundamentals.

Programming Languages: Front-end: JavaScript (React, Angular, Vue.js, p5.js, D3.js, Jasmine), Typescript, HTML, CSS, RESTful APIs, and web service protocols. Back-end: Python (Anaconda), Java (JavaFX, TestFX), Apex, Node.js, C#. GL Shading Language, OpenGL, JSON.

Databases: Relational databases: SQL (MySQL). NoSQL. MongoDB. SOQL. SOSL.

Testing and Tools: Unit testing (Mockito), integration testing, and end-to-end testing. Atlassian (Jira and Confluence), Cypress, Selenium, Git, GitHub, Bitbucket, Unity Game Engine.
